StruCalc Crack + [Win/Mac]

1. StruCalc is a graphical calculator for the sizing of members. It offers fast and easy sizing of members for the most common load cases, including shear, bending moment, axial force, moment, deflection, internal and external pressure, torsion, point loads, distributed loads, and shear stress. 2. StruCalc calculates with high accuracy using an optimized Finite Element Model (FEM). 3. Its interface is easy to use and requires no time to learn. 4. Its interface and features are organized to make it easy to use and to find the commands you need. 5. It is compatible with Windows 7 and later operating systems. Key Features • Automatically calculates the shear, moment, and deflection of members for: • shear-dominated members: • moment-dominated members: • mixed shear and moment members: • Flexible members such as beams, slabs, columns, and I-beams. • Complex geometry. • Supports all of the common members including: • Flange-to-beam joints: • Faceted cylindrical and spherical joints: • Cylindrical and spherical hole joints: • Bolted-joints: • Joints between beams and columns: • Fixed and movable joints between frames and columns: • Toggled and pinned joints between beams and columns: • Hanger joints: • Joints between beams and beams: • Any beam cross-section: • Wedge-shaped or channel-shaped members: • Rectangular, trapezoidal, or rhomboidal members: • Column cross-sections: • Z-shaped, double-Z, and other non-square cross-sections: • Circle, ellipse, or ellipsoid shapes: • Square-root, cube-root, or other circular cross-sections: • Any member cross-section: • Any member cross-section: • Any member cross-section: • Bolted and pinned joints: • Dummy plates: • Dummy plates:

==== -> CHANGE MAX STRAIN -> CHANGE MAX TENSION -> CHANGE RENDER RATIO -> CONVERT FROM ANALOG TO DIGITAL -> CONVERT FROM DIGITAL TO ANALOG -> CONVERT FROM INCH TO METERS -> CONVERT FROM METERS TO MILLIMETERS TO METERS -> CONVERT FROM MILLIMETERS TO METERS -> CONVERT FROM MILLIMETERS TO MILLIMETERS -> CONVERT FROM PIXELS TO MICRONS -> CONVERT FROM PIXELS TO MILLIMETERS -> CONVERT FROM PIXELS TO MICRONS -> CONVERT FROM PIXELS TO MILLIMETERS -> CONVERT FROM MI

StruCalc Crack+

StruCalc is an analysis software for determining design, calculation, and load capability of all structural members. It is used in the industry and universities as a tool for design and sizing of structure members and structures. StruCalc has been designed as a quick and easy solution for completing analysis of structural members and structures in seconds. StruCalc provides an easy way to create a load program, analyze a structure, and prepare printouts for approval. StruCalc does the job fast and easy. • Create a program with a complete set of calculations and analysis in seconds. • Write out the calculations as a complete set of files for quick print outs. • Design members as a single member or as a series of members in a project. • Calculate member location, z location, and full size. • Display shear, moment, and deflection diagrams and calculate deflection for any member. • Load a topography that is imported from a DEM file or from a map file. • Create a wind load program for all members or just select a member. • Load a specific function that is a combination of all calculations. • Perform a load analysis to the nearest half inch or 1/8 inch. • Calculate a load for all members in a program or just select a member. • Visualize member loads using contours and bar charts. • Calculate a deflection for any member. • Determine the member size for the ultimate carrying load using the AutoSize option. • Create a program and print a printout for a member. • Analyze multiple members in one project or multiple projects with the same or different member types. • Print out a printout for the member that has the calculations. • Create a program with a complete set of calculations and analysis in seconds. • Write out the calculations as a complete set of files for quick print outs. • Design members as a single member or as a series of members in a project. • Calculate member load at member load at member load at member load at member or as a series of nembers or just select a
